PROFESSIONAL SUMMARY

M.Sc. Data Science graduate (GPA 8.28/10) applying machine learning, statistical modeling, and data analysis to deliver end-to-end, business-aligned solutions — including a production-grade generative AI system built during a 6-month internship and CreditSense, a live fintech app turning 25+ transactional signals into actionable credit-risk insights for 190M+ unbanked users. Proficient in Python, R, and BI tools (Power BI, DAX, SQL); comfortable partnering with cross-functional teams to translate analysis into business decisions.

TECHNICAL SKILLS

- Languages:** Python, SQL, R
- Machine Learning & Statistical Modeling:** Regression, Classification, Time Series Forecasting, A/B Testing, Feature Engineering, Transfer Learning, PyTorch, TensorFlow, Scikit-learn, WGAN-GP, Stable Diffusion
- Deep Learning:** Bi-LSTM, Self/Cross-Attention, U-Net, VAE, Diffusion Models, Pixel Shuffle, FP16/AMP
- NLP & Text Analytics:** TF-IDF, BM25, Cosine Similarity, LSA, VADER, NRC Lexicon, CLIP, Sentiment Analysis
- Data Analysis & BI:** Power BI, DAX, Tableau, Pandas, NumPy, Matplotlib, Exploratory Data Analysis (EDA), ETL, Statistical Analysis
- Tools & Platforms:** GitHub, Streamlit, HuggingFace, Google Colab, MongoDB, Neo4j, FastAPI, Netlify, Jupyter

EXPERIENCE

Data Science Intern (Remote) — NullClass

Dec 2025 – May 2026

- Applied machine learning and statistical modeling end-to-end — training a custom 12.33M-parameter WGAN-GP with a 3-layer Bi-LSTM text encoder, achieving sub-100ms inference across 102 classes at 96×96 resolution in PyTorch.
- Optimized a production Stable Diffusion v1.5 pipeline via FP16 quantisation, CPU offloading, and attention slicing, cutting peak VRAM from ~7GB to 3-4GB on NVIDIA T4 while generating 512×512 images in 8-12s — directly reducing infrastructure cost.
- Delivered a dual-pipeline web API (fast 96×96 preview + HD 512×512 diffusion output) with a style-conditioned prompt engine and fuzzy text-matching for zero-hard-failure handling of ambiguous prompts, taking the system from proof-of-concept to deployment.

PROJECTS

CreditSense — AI Loan Eligibility Engine

Python · Scikit-learn · Netlify · Account Aggregator Framework · UPI Integration

- Independently designed and deployed a live fintech app analysing 25+ signals (UPI patterns, merchant diversity, income regularity, repayment behavior) to compute a 0-100 credit score, pre-approved loan amount, EMI, tenure, and FOIR with no CIBIL score required — demonstrating end-to-end project ownership.

News Research & Analytics Tool — GenAI Hackathon Winner

Python · Streamlit · TF-IDF · BM25 · Cosine Similarity · LSA

- Won a GenAI Hackathon building a RAG-style retrieval system (TF-IDF, BM25, cosine similarity, LSA) with real-time search on Streamlit, cutting manual review time by ~40% through automated summarisation.

GDP Analysis Dashboard

Power BI · DAX · Data Modelling · World Bank & OECD Data · Excel

- Designed an interactive Power BI dashboard analysing global GDP trends (2017-2024) across 180+ countries, authoring DAX measures (Total GDP, YoY Growth %, rankings) and modelling relationships across World Bank and OECD datasets for cross-source analysis.

EDUCATION

M.Sc. Data Science

2024 - 2026

Vellore Institute of Technology - AP (VIT-AP) · GPA: 8.28/10

B.Sc. Physics

2019 - 2022

Ranchi University (Gossner College) · GPA: 8.05/10

CERTIFICATIONS

- Deloitte - Data Analytics Job Simulation (Forage)
- JP Morgan Chase & Co. - Quantitative Research Job Simulation (Forage)
- Python and Statistics for Financial Analysis (Coursera)
